

FLAT PADS FROM MULTI-WALL

Construction

Multi-Wall built up **Flat Pads** and blocks are constructed of layers of 3/16" A flute single face corrugated paper laminated into shapes of various lengths, widths, and thicknesses to provide cushioning and clearances designed to meet or exceed National Motor Freight Specifications.

Applications

Corrugated **Flat Pads** and blocks are used in a multitude of applications when blocking, spacing, void filling, or special built up pad fabrications are required. **Flat Pads** often replace foam blocks, when greater strength, multiple load shocks, or environmental factors are involved. Typical uses are:

- Case goods furniture
- RTA furniture
- Kitchen cabinets
- File cabinets
- Work stations
- Tables
- Industrial shelving
- Electronics
- Corrugated skid runners

Available liners, widths, lengths, and thicknesses

The need for foam or polyethylene wrapping, and the labor to apply them to your product, can often be eliminated when **Flat Pads** are ordered with our non-abrasive liners. **Flat Pads** are available with standard corrugated liner or with optional non-abrasive linings: Michelman® coating, MULTI-SOFT tissue, or microfoam.

Flat Pads are available in widths up to 44", lengths up to 120", and thicknesses up to 12".
