

# ROLL EDGE PROTECTION

**EdgeBAND** edge protection, as an integral part of the packing system, is of critical importance when rolls must meet exacting performance specifications.

EdgeBAND edge protector is easy to handle and to apply to the rolls. A unique feature of Multi-Wall's EdgeBAND edge protector is the die cutting and creasing configuration that locks the 90 degree pre-bent fingers against the roll of material.

EdgeBAND edge protectors are often used in conjunction with wrappers, headers or stretch wrap systems.

**EdgeBAND:**

- Provides resistance to tearing or crimping of roll edges.
- Separates rolls from contact with truck, floor and walls.
- Provides buffer between rolls.
- Reduces abrasion and tearing.

In addition to our standard product offering, other fiber calipers, band sizes and finger lengths are available on request.

EdgeBAND roll edge dispensers incorporating a roll unwind section, footage counter and cutting bar are also available for purchase. These compact dispensers will increase packing efficiency and require minimal floor space in your plant.

**Standard Roll Edge products**

		ft./roll	rolls/pallet
.040	3" band, 3" fingers	350	32
.040	3 1/2" band, 5" fingers	350	32
